Clonallon

CUSTOMISING YOUR PATIENT CARE

Who is Clonallon?

Clonallon Laboratories Ltd was incorporated in 2001 to manufacture customised sterile surgical and medical procedure packs for global healthcare market.

Based in a modern facility in Northern Ireland, Clonallon manufacture sterile procedural packs in validated Class 7 Cleanrooms and all our processes and Quality Management Systems are accredited to ISO13485:2016 and MDD 93/42/EC. Distribution of Clonallon and third-party products is carried out from our warehouse and controlled by our own in-house bespoke software called the Management Information System. All Clonallon manufactured goods are provided with a Unique Device Indicator (UDI) which allows full traceability along the supply chain to an individual patient.

We focus on patient safety by providing single-use procedure packs and contract manufacturing services that put you in control. Firm clinical knowledge has allowed us to establish a trusted reputation in the healthcare industry and has enabled us to further develop and expand our services to client focused pack contract manufacturing. Our corporate ethos is defined by the intent to increase patient safety and reduce the overall burden of HCAs on our healthcare institutions.

Our products have been validated for a shelf-life of three years from the date of manufacture. We have worked closely with Veterinary Clinics across the UK and Ireland to develop a product portfolio to suit their clinical requirements and you will find examples of these products within this brochure. However all of our procedure packs are fully customisable to suit **your** needs.

For any enquires please contact us for more information using the details below.

CUSTOMISING YOUR PATIENT CARE

Why Choose a Customised Procedure Pack?

A Customised Procedure Pack delivers a specific set of disposable medical products provided in a single packed sterile tray format.

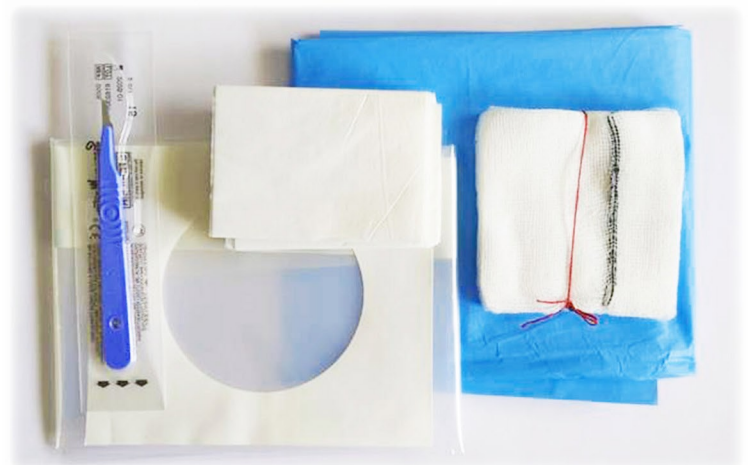

Benefits of using a Customised Procedure Pack:

1. Simplify your workflow: Designed to streamline your procedures. Everything you need in one convenient package.
2. Improve safety and efficiency: Sterilised and ready to use.
3. Reduced Liability: Elimination of the risk of cross infection from a re-usable device.
4. Save money: By purchasing our procedure packs, you can save money from reduced ordering and admin costs on individual supplies and instruments.
5. Fully customizable: Fully customizable to cater for veterinary professional's preference.
8. Complete traceability of all CE marked components used.
9. Environmentally friendly: Single use packs do not require reprocessing. Reprocessing medical equipment can require the use of chemicals and energy, contributing to pollution and greenhouse gas emissions. Improper disposal of reprocessed medical equipment can also contribute to environmental contamination.

Benefits of working with Clonallon:

1. Clonallon has been at the forefront of customised procedure pack design and manufacture for over 20 years. Our competency in this area is second to none.
2. We will work closely with you to develop your customised procedure pack to suit your clinical needs.
3. Samples are provided for evaluation.
4. Once the pack contents have been established, we will ensure optimum stock holdings are maintained to facilitate immediate delivery for recurring orders.
5. All our products are CE marked
6. Our Management Information System ensures complete traceability of components along the supply chain.
7. All our goods are fitted with a Unique Device Indicator.
8. All our packs are manufactured in our cleanroom facility in Northern Ireland. You can be confident of supply, quality and price competitiveness throughout the UK and Ireland.
